

Cresco™ Cast Stone

Description

Cast stone is an architectural precast concrete designed to simulate natural cut stone and offered as a more affordable alternative. It is produced by combining Portland cement with sand, aggregate, admixtures, water and pigment and vibration dry tamping it into a mold having the desired shape. Depending on the size and shape, cast stone may be steel reinforced. The 28 day compressive strength exceeds 6,500 psi. Cold water absorption is less than 6% and linear shrinkage is less than 0.065%.

Products

- Accent Blocks
- Address Blocks
- Address Markers
- Balustrades
- Bollards
- Columns
- Crown Molding
- Entry Ways
- Fireplaces
- Headers
- Keystones
